Ducted Split System Air Conditioners

ISD 171–351 LYX series

The ISD indoor units, together with their associated OSA outdoor units, provide a variable capacity reverse cycle (heat pump) split system air conditioner designed and developed to comply with and exceed Minimum Energy Performance Standards (MEPS AS/NZS 3823). Each system has been successfully tested at 52°C ambient.

Ducted Split System Air Conditioners

ISD 171–351 LYX series

Applications

These units have been specifically developed for air conditioning of light commercial and residential premises, e.g. offices, motels shops and homes.

Suitable for applications using full or high proportions of fresh air (nb pre-heating on heating cycle may be required). Also suitable for VAV, close control and supply air temperature control.

AIR FLOW SELECTION

If the air returning to the indoor coil is regularly expected to be above 50%RH, then the coil face velocity should be limited to be 2.5 m/s or less.

High humidity levels can occur in tropical or subtropical conditions, and/or when heavily moisture laden fresh air is introduced. Consideration must always be given to selecting an air flow and face velocity that avoids water carry-over problems.

Applications using full or high proportions of fresh air should be referred to your nearest Temperzone sales office to establish the correct selection of units.

FEATURES

Lower GWP

Utilising R32 Refrigerant, Temperzone's Eco ULTRA Ducted Splits enable a 75-80% reduction of Global Warming Potential (GWP) per kW of cooling when compared to R410A units.

User Friendly

The air conditioning system is available with an optional SAT-3 Controller or T2T-100 Controller which is wired to the Indoor or Outdoor unit. These thermostats have been designed to maintain a high level of comfort for room occupants. Emphasis has been placed on providing controls that are easy to install and use – despite the sophisticated microprocessor system that runs it. Use of the Auto and Timer function settings allows you to "set it and forget it".

Economy

Each ISD/OSA system has a variable capacity compressor which uses less energy than alternative types of compressor.

Efficient

Indoor units include a high efficiency electronically commutated (EC) motor. Part load operation at low loads (75% airflow equates to 55% power use) using Temperzone algorithms. Each outdoor unit incorporates a high efficiency **inverter** compressor. Heat exchange coils use inner grooved (rifled) tube for better heat transfer.

Performance

The variable capacity inverter compressor technology can provide close comfort control of the room temperature. Each OSA outdoor unit has an extra boost capacity available for fast response when well away from set point at start-up, and an energy saving low capacity turn-down.

A dynamically balanced forward curved fan with a multi-speed EC motor enables fine tuning of the indoor unit to match the supply air requirements. These EC motor fans have a fully integrated speed control that enables soft starting. Fan speed can be stepped to your own requirements or continuously variable using a 0–10V DC control signal. The system also includes a temperature sensing head pressure control which

Ducted Split System Air Conditioners

ISD 171–351 LYX series

enables the system to compensate for outdoor ambient temperatures below 20°C on cooling cycle, and above 15°C on heating cycle.

Separable

The ISD 171/211/251 indoor units are separable for ease of installation through small man holes – minimum 550 mm sq. clear aperture. It may be desirable in some applications to keep the two separate parts of the unit apart and joined by ducting, eg over a ceiling joist. A pair of the optional Spigot Plate Adaptors are available to facilitate this option.

Quiet

Each integral high efficiency EC motor can vary from zero to full speed. This allows slow ramp up with no sudden noise change. The motor can be controlled to have the best air flow for the ducting and requirements as well as used for de-humidifying the space.

The outdoor units' coil design permits low fan speeds and hence low noise levels. The compressor is isolated in a built-in, insulated compartment to minimise noise. The indoor unit is also insulated for noise attenuation and to prevent exterior condensation.

Slimline

The compact up-right design of the outdoor units requires only a 150 mm gap on the coil side where installation is against a wall. Their slimline cabinets are particularly practical where there is restricted space, e.g. side access pathways, balconies, narrow ledges, etc. The unit is free standing, but can be fitted on a wall using the optional wall mounting brackets.

Note: OSA 351 is a vertical discharge unit.

Durable

Both indoor and outdoor coil fins are epoxy coated for extra protection in corrosive environments, e.g. salt laden sea air. Each outdoor unit's cabinet is constructed from high grade galvanised steel - polyester powder coated (grey) for all weather protection (IP 44). External fasteners are SKT® coated steel. Heat exchange coils comprise aluminium corrugated plate fins on mechanically expanded rifled copper tube. Each indoor unit's cabinet is constructed from high grade galvanised steel and includes a plastic drain tray for complete corrosion resistance and a galvanised steel safety drain tray.

Soft Starting

EC motors and inverter compressors are soft starting therefore have none of the problems associated with high inrush current.

Insulation

Closed cell foam insulation has been used in the indoor units' cabinet to ensure no particles are introduced into the air stream. Both indoor and outdoor units are insulated to prevent external condensation forming on the cabinet exterior. The insulation is foil faced and meets fire test standards AS 1530.3 (1989) and BS 476 parts 6 & 7.

Control Option

Commissioning is made easier when the EC motor is to be controlled variably (within a restricted range, p11) by a 0–10 volt DC signal that can be supplied either by a BMS system, a sophisticated controller or Temperzone's optional TZT-100 Controller.

The systems' UC8 controller is BMS compatible with multi-unit control possible – either via digital and analogue signals or via Modbus. Refer to temperzone for other protocols available.

Self Diagnostics

The Outdoor Unit Controller (UC8) has a LED display to indicate faults and running conditions. A non-specific fault indicator is included for interface to external systems via the optional relay board.

Zone Control

ISD-LYX versions using SAT-3 controller can be fitted with the optional Zone Control kit which allows up to 6 zone dampers to be switched from the SAT-3 wall control. Standard damper motors, 24 volt ac, can be used with drive open/drive close.

An iZone Premium Control system including WiFi is also available – for information visit www.temperzone.biz; model search 'iZone Wall Control'.

Note: Consideration must be given to the minimum floor area requirements of R32 refrigerant..

Ducted Split System Air Conditioners

ISD 171–351 LYX series

OPTIONAL EQUIPMENT

Outdoor Unit:

1. Louvre Guard Kit (excl. OSA 351) for hail protection.
2. Wall mounting brackets (excl. OSA 251 & 351).
3. Anti-vibration mounts (rubber)
4. Drain connection - right angle
5. Fault relay board (201-000-105)

Indoor Unit:

1. temperzone SAT-3 Controller or TZT-100 Controller.
2. Six Zone Control kit for SAT-3.
3. iZone Premium Controller.
4. Spring mounting kit.
5. Supply & return air spigots (available in New Zealand only)
6. Spigot Plate Adaptors – Double Inlet, for use when separating ISD 171–251 indoor units (available in New Zealand only).
7. Filter Box c/w EU2/G2 rated filter (ISD 171/211/251) or EU4/G4 rated filter (ISD 351).

SAFETY FEATURES

1. HP and loss of refrigerant protection.
2. Anti-rapid cycle timer and internal overload for compressor protection.
3. Circuit breaker control circuits.
4. Time-and-temperature controlled electronic de-ice switch prevents icing up of the outdoor coil during heating cycle.
5. Frost protection on cooling cycle.
6. Sensor fault indication.
7. Compressor minimum run time to ensure oil return.
8. 12V control circuit.

COMPRESSOR

Each high efficiency variable capacity inverter compressor is hermetically sealed, quiet running and supported on rubber mounts to minimise vibration.

REFRIGERATION PIPING

Maximum line length is 60m; except for ISD 351: 90m.

Max. height separations between units are:

Outdoor unit **above** indoor unit: 20m

Outdoor unit **below** indoor unit: 20m.

Each OSA unit is shipped from the factory with a charge of R32 refrigerant sufficient for a line length of: ISD 171–251: 15m, ISD 351: 10m. Liquid and suction service valves are provided. The matched indoor unit is shipped with a holding charge of nitrogen. Both units have brazed pipe connections.

WIRING

The electrical supply required (including voltage fluctuation limits) is:

OSA 171RLS:

1 phase 220–240 V a.c. 50 Hz with neutral and earth.

OSA 171/211/251/351 RLT:

3 phase 380–415 V a.c. 50 Hz with neutral and earth.

A control panel, located in each outdoor unit, is fully wired ready to accept the main power supply. Each system complies with the requirements of the Regulatory Compliance Mark (RCM) for electrical safety (AS/NZS 60335.2.40) and EMC (AS/NZS CISPR.14).

Provision has been made for compliance with DRED, ie demand response enabling device standard AS/NZS 4755.3.1.

Ducted Split System Air Conditioners

TZT-100 Controller (Optional)

FEATURES SUMMARY

- Cool / Cool Dry / Heat / Auto Dry / Auto / Fan Only modes.
- Auto / High / Medium / Low fan speed selection. (customisable).
- Temperature setting range from 1°C – 38°C.
- LED to indicate status of the unit [Power On/Off].
- Room & set temperature display.
- Real time clock.
- 12 or 24 hour time display
- °C or °F display
- **7 day timer** – up to two events (four start and/or stops per day)
- On demand countdown run timer, up to 9 hours.
- Auto-Restart or No Restart after power failure
- Continuous or Intermittent selection of fan run-on in dead zone.
- Backlit screen for ease of reading;
- Soft touch tab keys
- PIN protected menus (Installer PIN)
- Keypad and/or temperature lock
- Filter monitor option (by hours)
- Occupancy sensor inputs
- Integrated Modbus option
- Battery backup (Lithium).
- **Sleep function** – improves night time comfort and saves energy.
- Audible beep to acknowledge key entry or wireless remote control.
- 24V control cable.
- Optional remote air temperature sensor

Optional:

Remote return air sensor

For more information visit
www.temperzone.biz;
model search 'TZT-100'

Ducted Split System Air Conditioners

SAT-3 Controller (Optional)

FEATURES SUMMARY

- Cool / Dry / Fan modes.
- Heat / Auto modes
- Auto / High / Medium / Low fan speed selection (customisable).
- Temperature setting range from 16°C – 30°C.
- Room temperature display.
- Real time clock.
- **7 day timer** – up to four start and/or stops per day
- Override countdown run timer, up to 4 hours..
- Continuous or Intermittent selection of fan run-on in dead zone.
- Backlit screen for ease of reading; changes colour for each mode.
- Soft touch tab keys
- Battery backup (Lithium).
- **Sleep function** – improves night time comfort and saves energy.
- **Eco mode** – for economical operation.
- **Quiet mode** – for outdoor unit.
- Low voltage control cable.
- Connects to either indoor unit or outdoor unit.
- **Colour:** white and light grey.

Optional:

1. Remote return air sensor
2. Six Zone Control kit

For more information visit
www.temperzone.biz;
 model search 'SAT--3'.

AIR HANDLING

Airflows are for a dry coil. Reduce airflow by 10% in high moisture removal conditions. In a free blow application, beware of exceeding indoor fan motor's full load amp limit. Refer back page for filter losses. Air flows given are for ISD units without filter installed.

Ducted Split System Air Conditioners

Specifications

System				
Indoor Unit	ISD 171LYX	ISD 211LYX	ISD 251LYX	ISD 351LYX
Outdoor Unit	OSA 171RL(S/T)FH	OSA 211RLTFH	OSA 251RLTFH	OSA 351RLTFV
Cooling Capacity *1 kW	14.8 (8.6~18.5)	19.5 (9.4~25.3)	23.3 (13.3~29.5)	35.1 (15.0~43.0)
Net Cooling Capacity (MEPS) *1 kW	14.5	19	22.5	33.8
EER / AEER (cooling)	3.26 / 3.23	3.15 / 3.13	3.19 / 3.17	3.29 / 3.27
Heating Capacity *2 kW	14.9 (7.0~18.3)	20.8 (8.4~25.6)	23.3 (10.4~29.2)	35.0 (12.5~40.7)
COP / ACOP (heating)	3.42 / 3.39	3.57 / 3.54	3.48 / 3.45	3.59 / 3.57
Nominal Air Flow*3 l/s	800 (400~1000)	1050 (525~1330)	1300 (650~1330)	1900 (950~1690)
Sound Levels *4				
Indoor Unit (SWL)	69	71	74	77
Outdoor Unit (SPL)	56	55	58	58
Power Source *5	1 phase or 3 phase	3 phase 400 V a.c. 50 Hz		
Compressor type	inverter			
Indoor Fan Max. Current A	3.5	6	6	5 (x2)
Running Amps (Total)				
OSA*RKS (1Ø) A	21	–	–	–
OSA*RKT (3Ø) A/ph.	9 / 6.5 / 6.5	13 / 9 / 10	16 / 10 / 10.5	23 / 14 / 14
Refrigerant	R32			
Maximum Vertical Separation m	20	20	20	20
Maximum Line Length m	60	60	60	90
Pipe Sizes (Suction/Liquid) mm OD	19 / 9.5	19 / 9.5	22 / 13	28 / 13
Operating Range (outdoor ambient)				
Cooling	-10°C to 52°C			
Heating	-15°C to 25°C			
Finish				
Indoor Unit	zinc galvanised steel			
Outdoor Unit	grey polyester powder coat			
Weight (net/shipping) kg				
Indoor Unit	68 / 78	86 / 97	89 / 161	124 / 140
Outdoor Unit	105 / 115	129 / 136	161 / 168	254 / 266

Notes:

*1 Nominal Cooling Capacity (gross) at AS/NZS 3823 conditions:

- Indoor Entering Air Temperature 27°C D.B., 19°C W.B.;
- Outdoor Entering Air Temperature 35°C D.B.

*2 Heating Capacity at AS/NZS 3823 conditions:

- Indoor Entering Air Temperature 21°C D.B.;
- Outdoor Entering Air Temperature 7°C D.B., 6°C W.B.

*3 Supply air flow at Nominal Cooling Capacity conditions stated above. Max. air flow range figure is at 2.5 m/s coil face velocity.

*4 Sound Levels are measured at nominal cooling capacity conditions stated above. SPL measured at 3m from unit and at full fan speed.

*5 Voltage range: Single phase systems 220–240 V;
Three phase systems 380–415 V

Materials and specifications are subject to change without notice due to the manufacturer's ongoing research and development programme.
